El riego. Fundamentos hidráulicos LOSADA VILLASANTE, ALBERTO 2009-07-20 Esta cuarta edición de "EL RIEGO. FUNDAMENTOS HIDRÁULICOS" mantiene los objetivos de las versiones anteriores. Las bases hidráulicas de las técnicas de riego y avenamiento se plantean y desarrollan con el análisis de corrientes en tuberías y acequias, relaciones de aforo y sistemas de impulsión. Se ha cuidado la presentación formal del estudio de redes a presión y, en particular, el del cálculo de ramales de riego por aspersión y goteo. También se estudian los principios del movimiento del agua en medios porosos, con ejemplos que fijan los principios esenciales de la filtración en saturación y subsaturación. La revisión realizada ha prestado atención especial al hecho de que la capacidad para comprender el análisis depende del grado de conocimientos básicos de que se dispone, siempre limitado. Por ello, da forma más clara a la relación entre las bases analíticas de las expresiones matemáticas, su forma gráfica y sus aplicaciones prácticas. A tal efecto, el tratamiento de las materias enunciadas ha sido objeto de un esfuerzo para facilitar el uso de las relaciones de cálculo convenientes sin violentar el criterio de no aligerar las conclusiones prácticas con un exceso de empirismo. Los ejercicios prácticos que culminan la obra han sido propuestos con la intención de aclarar, afianzar y complementar la materia desarrollada. Su resolución en hoja de cálculo significa un grado de precisión que representa un salto significativo sobre soluciones gráficas y manuales anteriores. En definitiva, al reestructurar parte de la materia tratada para hacerla más asequible, se ha procurado reducir la carga analítica al mínimo indispensable y, al mismo tiempo, abrir vías de cálculo a quienes estén familiarizados con técnicas usuales de ordenador.

Effects of Ionizing Radiation: Report to the General Assembly, with scientific annexes United Nations. Scientific Committee on the Effects of Atomic Radiation 2008 This publication presents the consequences of exposures to radiation by the use of radiobiological research and results of epidemiological studies. It also summarises and evaluates sources of human radiation exposures, discusses principal features of radiation risk perception and gives a brief summary and indication of perspectives. Volume 1 comprises the main text of the 2006 report to the General Assembly and 2 scientific annexes: Annex A - Epidemiological studies of radiation and cancer; and Annex B - Epidemiological evaluation of cardiovascular disease and other non-cancer diseases following radiation exposure. This book will appeal to individuals, government officials, scientists and medical specialists and those with a specific interest in the possible hazards of natural and man-made sources of radiation.
